AI-assisted build

Product Case Study

InsightPulse

AI-powered customer feedback dashboard for product and engineering teams.

What it does

- Converts raw customer reviews into sentiment, categories, and urgent issue flags.
- Shows product health through KPIs, charts, and recent review evidence.
- Uses an AI Product Brief agent to summarize dashboard signals and recommend engineering focus areas.

Role	Product Manager / AI Product Prototype Owner
Live App	https://sense-feedback-flow.base44.app
Build	AI-assisted MVP prototype created with Base44

Product Requirements Summary

MVP Public Preview

Brief PRD overview aligned to the actual MVP screens and current product behavior.

Problem

- Customer feedback arrives across app stores, support tickets, email, web forms, and social media.
- Manual review is slow and inconsistent.
- Critical bugs, shipping issues, or UX complaints can be buried under generic comments.

Solution

- Central dashboard for feedback health and sentiment trends.
- Feedback triage agent classifies sentiment, category, and urgency.
- AI Product Brief summarizes the dashboard and recommends engineering focus areas.

Primary Users

- Product Managers
- Engineering Leads
- Customer Success / Support

Product Value

- Faster feedback triage
- Clearer roadmap evidence
- Quicker engineering escalation

Current MVP

- Public dashboard prototype
- Mock data import
- Review submission
- AI brief generation

Success Metrics

Time-to-insight

Reduce manual review by auto-classifying feedback in seconds.

Escalation latency

Surface urgent bugs and high-severity complaints quickly.

AI quality

Track sentiment, category, urgency, and summary accuracy.

MVP Walkthrough: Dashboard Overview

MVP Public Preview

KPI cards, AI Product Brief entry point, sentiment trend, and category volume view.

Visible MVP details: 36 total reviews, 50% positive sentiment, top category User Experience, 42% response rate, Import Mock Data, and Generate Brief.

MVP Walkthrough: Recent Reviews

MVP Public Preview

Review evidence shows sentiment, rating, confidence, source, category, and response status.

The screenshot displays the FeedbackAI Analyzer dashboard. On the left is a dark sidebar with navigation links: Dashboard, Reviews, Analytics, Trends, Categories, and Settings. The main area is titled 'Dashboard' with the subtitle 'AI-powered customer feedback insights'. It features a notification bell, a 'Refresh' button, and an 'Import Mock Data' button. Below this is a 'Recent Reviews' section showing the latest customer feedback, with a total of 36 reviews. Six review cards are visible, each containing a user profile, sentiment, response status, rating, confidence score, review text, source, and category.

User	Sentiment	Response Status	Rating	Confidence	Review Text	Source	Category
Sarah Mitchell	positive	responded	★★★★★	95%	Absolutely love the new interface! It's so intuitive and easy to navigate. The redesign really improved my workflow and I can find everything I need in seconds.	App Store	User Experience
James Rodriguez	negative		★★★☆☆	88%	Shipping took way too long — over three weeks for a domestic order. The product itself is fine but the delivery experience was unacceptable.	Google Play	Shipping
Emily Chen	positive	responded	★★★★★	92%	The product quality is outstanding. I've been using it daily for two months and it still works like new. Well worth the investment.	Website	Product Quality
Michael Park	neutral		★★★☆☆	71%	It works as described, nothing more, nothing less. Average product at a fair price. Does the job but doesn't blow me away.	Email	Pricing
Aisha Patel	positive	responded	★★★★★	97%	Customer service was incredible! Had a billing issue and the team resolved it within minutes. Really appreciate the quick and friendly support.	Support Ticket	Customer Service
Tom Wheeler	positive		★★★★☆	76%	Would love to see a dark mode option and better notification settings. The app is great but these features would make it perfect.	Social Media	Feature Request

Example labels: positive/negative/neutral sentiment, confidence score, App Store/Google Play/Website/Email source, and product category tags.

MVP Walkthrough: Review Submission

MVP Walkthrough: AI Product Brief Agent

MVP Public Preview

The AI agent summarizes dashboard evidence and creates an engineering recommendation.

Agent Inputs

Sentiment trend, top categories, recent reviews, and urgent issue signals.

Agent Outputs

Summary of main complaints, recommendation for engineering, and plain-language product brief.

Core Requirements and AI Workflow

MVP Public Preview

Concise technical product view of how the MVP turns reviews into product decisions.

1. Dashboard KPIs

Total reviews, positive sentiment, top category, response rate, trend charts.

2. Review Submission

Name, source, review text, rating, and automated triage trigger.

3. Sentiment Classification

Strict Positive, Neutral, or Negative labels with confidence display.

4. Category Detection

User Experience, Shipping, Product Quality, Pricing, Customer Service, Feature Request.

5. Urgency Detection

Flags high-severity feedback such as broken flow, crash, error, or business impact.

6. AI Product Brief

Reads dashboard evidence and generates a summary plus engineering recommendation.

AI Workflow

Submit/import feedback -> classify sentiment -> extract category -> detect urgency -> update dashboard -> generate AI Product Brief -> recommend engineering focus.

Roadmap, Architecture, and Product Ownership

MVP Public Preview

Portfolio positioning for a Technical AI Product Manager role.

Technical Overview

- React-style single-page dashboard experience.
- CustomerReview data model: name, text, source, rating, sentiment, category, status, confidence.
- AI-assisted workflow for triage, classification, and dashboard summary generation.
- Public preview access for portfolio review.

Roadmap

- Add CSV upload and external feedback ingestion.
- Integrate Jira, Azure DevOps, Zendesk, or Linear.
- Add confidence scores and human review for AI labels.
- Add role-based access, audit logs, and team workspaces.

My Role

I designed and launched this AI-assisted MVP prototype using Base44. My focus was product strategy, user problem framing, feature definition, AI workflow design, dashboard requirements, success metrics, and roadmap planning.

Skills demonstrated

Technical Product Management, PRD writing, AI-assisted prototyping, dashboard analytics, feedback triage, agent workflow design, product metrics, backlog planning, and AI governance awareness.

Note This is an AI-assisted portfolio MVP. It should be presented as a product prototype and PM case study, not as a full custom-coded enterprise product.
